## CRETE BIRD REPORT 1998

### Introduction to Crete Bird Report 1998

Thank you to all those who have spared time to send in reports of their sightings. It is all helping to give us a better picture of the birds on the island of Crete. Denis Townsend has worked hard collating all the records you have sent in. Many thanks again to him for all his hard work without which this report would not appear. Please help him by submitting any further records in the order used in this report. Any records of weather and other reports of mammals, butterflies and moths and amphibians and reptiles recorded, preferably with sites are also very useful.

#### Weather:

The winter weather was mild until early May when there was a period of cool wet weather but then the summer settled down to the usual hot dry season. The Autumn and Winter did not have any exceptional weather which affected bird numbers.

#### Names and spelling:

Many more place names are appearing in the text and we have refer you to the Nelles Verlag 1: 200,000 which hopefully agree with the spelling we have used.

#### Illustrations:

Many thanks to Ken Baldridge for his illustrations which we have used in this report.

The Bird List follows the order in "The Birds of Greece" Handrinos/Akriotis.1997.
