**From the Alps to the Adriatic
31 May – 10 June 1998**

**From the Alps to the Adriatic
31 May – 10 June 1998**

The group

Jonathan Clarke
Nym Clarke

René Yates-Watson

Keith Ball
Joyce Ball

Nancy Lucas
Lilian Stewart

Hylde Morley
Brenda Hurn

Isobel Rushford

Leaders: Paul Tout and Phil Shaw

As always, this holiday contributed to the protection of wildlife enjoyed by the group by way of a contribution to the Birdwatching and Bird Study Association of Slovenia (DOPPS – BirdLife Slovenia). A thank you from Slavko Polak of DOPPS appears at the end of this report – in this case received by e-mail – describing corncrake survey work and conservation education done by DOPPS with our help. The £250 contributed this year to DOPPS is part of more than £17,000 raised in this way since 1991 (including the 1999 season of holidays) by Honeyguide for conservation work in Europe.

Notes and lists compiled by Phil Shaw & Paul Tout.

Pictures by Rob Hume.

Cover illustration: peregrine falcon over the Rilke Path, with Duino behind.

From the Alps to the Adriatic 31 May - 10 June 1998

Itinerary

Sunday 31 May: travel from London Gatwick via Venice Marco Polo airport to Sistiana.

Monday 1 June: the Karst

Tuesday 2 June: Slovenia; Trnova forest and dolina (swallowhole).

Wednesday 3 June: Lake Doberdo, Isola della Cona

Thursday 4 June: Slovenia, Rakov forest and karstic lake of Cerknisko Jezero. Meeting with Slavko Polak from Birdlife Slovenia (DOPPS).

Friday 5 June: free day. Venice, Ljubljana or local walk.

Saturday 6 June: Cornino, griffon vulture release site in pre-Alps. Peonis - eagle owl site. Fabio Perco, local conservationist, joined the group for dinner.

Sunday 7 June: Karst grassland, botanic gardens of Carsiana.

Monday 8 June: set-aside field with cornflowers at Mariano; bee-eater quarry at Media; Gonars bog; Campo Formido – airfield for gliders/dry meadow, lagoon of Grado including Isola della Cona wetland reserve.

Tuesday 9 June: Julian Alps at Cason di Lanza.

Wednesday 10 June: Sistiana to Venice and home.

Diary notes with botanical and other highlights

1 June - the Karst

Jurinea Jurinea mollis (a knapweed type), yellow ox-eye, *Centaurea triumfetti* (a mountain cornflower), *Orlaya grandiflora* (a bur parsley), smoke tree, *Tragopogon tommasini* (a goatsbeard), peach-leaved bellflower, nettle-leaved bellflower, etruscan honeysuckle, sweet William, dyer's greenwood, crown vetch, kidney vetch, horseshoe vetch, mountain clover, tufted vetch, bloody cranesbill, alpine calamint *Acinos alpinus*, hoary plantain, drypis *Drypis spinosa*, common star-of-Bethlehem, feather grass, juniper, St Lucie's cherry, carnic lily, tassel hyacinth, meadow clary, pink convolvulus.

2 June - Slovenia

Short forest walk to mountain refuge where we had lunch. Beech/white fir forest with sycamore and elder. Carpets of dames violet, amelanchier, coral root, balsam-leaved archangel, yellow archangel, greater stitchwort, greater meadow-rue, false helleborine, alpine clematis, green hellebore, upright vetch, red campion.

Immediately after lunch on slope below refuge: poet's narcissus *Narcissus (poeticus) radiiflorus*, garland flower *Daphne cneorum*, matted globularia, elder-flowered orchid, round-headed orchid, grassy-leaved iris *Iris graminea*, great yellow gentian, Tommasini's flax, hairy broom, winged broom *Chaemaspartium sagittale*, mountain kidney vetch, solomon's seal, sweet cicely, raspberry, yellow veronica, cypress spurge, cowslip, sermountain sp. *Laserpitium* sp., angelica, wood anemone

Dolina and primrose site: three-leaved valerian *Valeriana tripteris*, yellow wood violet, dwarf alpenrose *Rhodathamnus chamaecistus*, goatsbeard spiraea *Aruncus diocia*, white butterbur, yellow veronica, *Primula tyrolensis*.

Rock thrush site: horn-nosed viper, black redstart but no rock thrush. *Gentiana clusii*, spring gentian, nice milkwort, carline thistle, crosswort.

Late afternoon: lady orchid, crested lousewort, narrow-leaved helleborine, burnt-tip orchid, herb paris, may lily, fly honeysuckle, twayblade.

3 June - Lago di Doberdo and Isola della Cona

Very hot. Tantalising glimpses of golden orioles in the tall poplar/willow stands at Lago di Doberdo. Here hawfinch and hoopoe were unexpected and two nests of great spotted woodpecker were located. Melodious warblers, circl bunting and whitethroats called from the scrub, destroyed by fire in some parts of the reserve but regenerating to provide improved prospects for many of the interesting species at this site. Red-backed shrikes were located, a female ground cricket found and high brown fritillaries were spectacular.

At Altura di Polazzo we had some identification problems with a woodlark at close range, partly obscured by longish grass and difficult due to gaping behaviour. Corn buntings were in evidence; some fields were abundant with dropwort.

To Isola della Cona for lunch in the welcome shade of the visitor centre's veranda. In the wetland there were black-winged stilts, little egrets and spoonbills and some ducks still hanging on, namely wigeon, teal and mallard. We had great views of grass snake, European pond terrapin and marsh frogs. It's always a good place for warblers of wetland habitats, today there were marsh, reed, great reed and Cetti's. The tamarisks here are *Tamarix gallica*.

It was much too hot and we departed for the famous ice cream parlour near Duino and a swim in the Adriatic at Sistiana. After dinner, a short pre-dusk excursion to Medeazza for great views of nightjars.

4 June - Slovenia

Brown bear droppings, roe deer, brown hare. Roman snail, chubb and roach in river. Marsh frogs.

Knotted cranesbill *Geranium nodosum*, yellow melancholy thistle, goatsbeard spiraea, maidenhair spleenwort, lesser butterfly orchid, twayblade, meadow vetchling, bladder nut.

May lily, baneberry, lily of the valley, common spotted orchid, sanicle, leopardsbane

Lunch spot: meadow clary, shining scabious *Scabiosa lucida*, *Knautia ressmannii* (another scabious), *Cyclamen purpurescens*, white helleborine, birdsnest orchid, burnt-tip orchid, fragrant orchid, common spotted orchid, hoary plantain, wild strawberry, tormentil, winged broom.

A short stop on the road alongside a marsh where there was a mass of ragged robin. We were here to try to lure a corncrake using Paul's tape; there was some response but the corncrakes were not stimulated to investigate us. Other plants noted: summer snowflake, marsh marigold, yellow flag.

A second stop further on was much more successful resulting in good if brief views of a male corncrake. Two quail were also spotted. This part of the marsh had much *Gladiolus communis* plus lax-flowered orchid and southern marsh orchids. Also noted: birdsfoot trefoil, *Scabiosa columbaria*, red clover, mountain clover, river water crowfoot.

A third stop near a village where the flora was yet more varied. Here the most conspicuous species was melancholy thistle amid a sward dominated by great burnet and sedges. Also noted: clustered bellflower, more lax-flowered and southern marsh orchids. Some postcard shopping and back to Sistiana for Claudio's 'arrosto'.

5 June – free day

Phil Shaw went to Venice; very warm and humid, did St Marks Squar, Rialto Bridge and bought the T-shirt. Brenda and Hilda took a 3½ train ride to view the Hapsburg architecture of Ljubljana. Others had a short walk around Medeazza, finishing at Osmiza, visiting a mosaic of karst grassland, scrub and pond. Highlights included crested tit and yellow-bellied toad. Plants noted: long-lipped serapias *Serapias vomeracea*, spear-leaved skullcap *Scutellaria hastifolia* and southern nettle tree *Celtis australis*. Swimming and paddling at Sistiana.

6 June - Pre-Alps

Peonis was the first site visited, a location known for eagle owls, but no sign of the birds at the nest site. Overhead, against a clear blue sky and above the towering peaks, were several soaring raptors; buzzards mostly but also a black kite and a honey buzzard were picked out.

Next stop was the Cornino griffon vulture site; 37 wild vultures and a number of captive birds resulting from various interactions with a human dominated world. Ravens, black kites and the odd buzzard made for an interesting hour's birdwatching. The information centre is now complete and contained much information about the vultures and the surrounding area. The temperature was now 90°F and rising, so we headed off to a higher altitude.

The Alta Valle del Torre was the place for lunch and afterwards a short walk through a mosaic of woodland and grass glades, presumably felled woodland. A Mexican stand-off between an occupied forestry tractor and the driver of a 4x4 resulted in some delay to the afternoon programme. Eventually we made our way down to the refuge. A walk around this resulted in a number of new botanical discoveries and good views of Bonelli's warbler.

One of the minibuses returned to Cornino to collect the stick left behind by Keith, allowing those lucky few another opportunity to check out the eagle owl site – a lifer for some.

Fabio Perco joined us for dinner and provided an interesting insight into several aspects of the Projecto Griffone which he was largely instrumental in establishing, plus some of the other difficulties associated with nature conservation – including of brown bears and wolves – in this part of Italy.

7 June – the Karst

The rock thrush, which we had been seeing most mornings along the Rilke Path, was accompanied today by two fledglings.

Visit to karst grassland prior to the botanic garden at Carsiana. The temperature was already well into the eighties and lots of insects were on the wing, including a number of yellow and black-winged ascalaphids – relatives of the ant-lion. Three hawfinches were seen, part of a family group presumably.

The visit to the botanic garden was as good as ever, illustrating well the adaptation of the various species for the range of local biogeophysical opportunities for plant growth. As usual the butterflies were well worth the visit in themselves with a number of species showing well including large wall brown, large skipper and baton blue.

With the temperature still climbing, a trip to the cave system in Slovenia, a UNESCO world heritage site, was called for. No birds to speak of around the cave but it was interesting botanically with sawwort, bloody cranesbill and yellow ox-eye prominent among the surrounding karst flora. The caves were impressive, well presented by a local guide and wonderfully cool 13°C as opposed to 35°C outside. Some two thousand horseshoe bats reside in the cave system and some constant calling could be heard near the exit – actually the natural entrance.

8 June – around Friuli-Venezia Giulia; from cornflowers to wetlands

Rain overnight and through breakfast cooled things down a bit for visits to local sites in central Friuli-Venezia Giulia. Our first stop at Mariano was a cultivated field in set-aside that had produced an amazing display of cornflowers and poppies. Plants also noted: field pansy, groundpine, prickly lettuce, black mullein, Venus's looking glass.

We continued on to a quarry at Medea to see bee-eaters, sand martins and turtle doves. We then moved onto Gonars bog, now pretty dry with much of the sedge community being invaded by trees and shrubs. An impressive stand of marsh helleborines was found together, with four other orchid species

Lunch at Campo Formido next to airfield used as a gliding club. Highlight was an interaction between a non-breeding marsh harrier, a common buzzard and a honey buzzard. Quails could be heard from the tall sward in several directions; this natural refuge clearly supports a strong local population.

After lunch we headed off towards the coast and made several brief stops at various locations around the lagoon of Grado ending up at Isola della Cona wetland reserve. The lagoon provided distant views of common tern, black tern and curlew plus a flock of some 60 mute swans. Mute swans were only re-introduced into the area in 1989 and have established well. Good views of Cetti's warbler and nightingale were finally obtained by the judicious use of a tape. At Isola della Cona the marsh warbler along the track to the hides remained uncooperative but most people got good views of great reed warbler; also lots of black-winged stilts and spoonbills. A kingfisher posed by a low-angle and reddening sun.

9 June - Julian Alps

We drove north to the valley of the River Tagliamento then on to Tolmezzo, Paularo and the Cason di Lanza close to the border with Austria at 1,500 metres. On the way we had exceptional views of honey buzzard and close views of crag martins. The meadows around and above the refuge had a wide range of alpine flowers; two types of gentians, alpine pasque flower, snowbells etc. Some members of the group had distant views of alpine chough. Also noted: bear's ear (*Auricula*), matted globularia; lots of chiffchaffs, tree pipits and ring ousels; red squirrel and hare. The conditions were good for photography with an abundance of flowers and scenery.

On the journey down we stopped for photographs again where plants included sweet William *Dianthus barbatus*. We found apollo butterfly and lots of silver-Y moths feeding in a meadow full of meadow clary. Further down we stopped at Paluzza for dippers but found only grey wagtails and redstart and rather philosophical graffiti written in English.

Rather than the direct route home we took a diversion to Peonis in the hope of repeating the eagle owl sighting with the whole group, but to no avail; despite waiting until well after the appointed hour the bird failed to appear. Dinner was therefore rather late.

10 June: Sistiana to Venice and home.

Honeyguide holidays
36 Thunder Lane
Thorpe st. Andrews
NORWICH, NORFOLK
United Kingdom

LETTER OF THANK YOU

We at DOPPS (Bird Watching and Bird Study Association of Slovenia)- BirdLife partner in Slovenia, are wish to express thank you for you donation to our organisation.
The sponsorship of Honeyguide holidays participants who visited Slovenia this year 1998, of total amount 730 DEM, will be spend by Notranjska local group of DOPPS this year.
Notranjska local group is a young DOPPS regional branch with a few common starting problems. Lack of members, money and equipment but full of enthusiasm, we are looking for sponsors to facilitate our field researches and nature conservation efforts. One of our best known actions are traditional "Crex nights" yearly Corn-crake counting at Cerknica lake. This year we counted about 50 of them, what is less than last year. Our efforts will be focused to find out the reasons for this. At DOPPS we have published an leaflets how to manage the wet grasslands, habitat of Corn-crake. With your help we will deliver the information to the local land-owner. I will prepare also a slide presentation for them in Cerknica. Our activities to convince the locals that the area is of great importance to birds are also organised birdwatching events, counting of waterfowl, ringing the migratory passerines, public relation and similar. The only bird-watching tower above the lake is not easy accessible. Honeyguide holidays participants who visited the hide this year insisted, that part of sponsored money should be spend for improvement of the access too. So, here I have informed you how generally the sponsored money will be spend.
I will inform you with details later, when the activities will be finished.

Thanks for your help again,

looking forward to meet you in Cerknica lake

Slavko Polak

president of DOPPS local Notranjska group
